Department of Computer Science

BSc Final Project Submission - Assessment Criteria (IN3007)

BSc students are expected to spend 450 hours on their final project. You must deliver outputs that are of value to identifiable beneficiaries and must conduct your project work in a professional manner.

The final submission, at the end of the project process, consists of the project report and all the materials produced during the project. The submission is treated as e*vidence of the work done in the project*: the project is assessed on the basis of the quality of the problem solution produced **and** the quality of the work that led to the solution, in view of the size of the challenges presented by the problem and of the abovementioned intended amount of effort.

As set out in the Project Handbook, the project report is required to exhibit the following:

- A clear definition of the problem addressed, project objectives, and for whom they were meant to be useful;
- A clear summary of the useful outputs produced;
- A short background and literature review, documenting how well you studied the context in which your project took place, e.g. reading relevant literature, examining software products; plus, *evidence* across your report that this information has been put to good use;
- Evidence of rigorous and appropriate method—a clear, systematic, logical and well-planned approach to the project work, including rational justification of choices made.
- Quality of the results, in terms of amount of challenge posed by the project;;
- Discussion and critical reflection on the value and implications of the results;
- Clear, orderly writing and organisation of the report.

Appendices and additional material submitted are required to document ALL project artefacts.

All projects must have received research ethics approval **and** must have obeyed the rules about ethics; otherwise, they shall receive a mark of ZERO.

Marking Guidance:

The final project submission is marked out of 100, and this mark counts for 85% of your overall module mark; the remaining 15% comes from the mark you receive for your Final Project Review. You must pass both, and the PDD, in order to pass the module.

Penalties are applied automatically for excess length, failure to submit required elements, and for late submission; see the Project Handbook for further details. Markers will also report any suspected or observed academic misconduct.

Markers are asked to assess the following aspects of your work and look for evidence of *critical thinking* across your project. While all aspects are important, '*Methods'* and '*Results and degree of challenge'* carry the heaviest weighting.

Problem Description & Objectives	Is there clarity about the goals and justification of the project?
Output Summary	Is the mandatory summary of useful outputs present and complete?
Literature / Critical Context	Have you read, understood and used the appropriate context information? How well?
Methods	How well was the work conducted? Was it well planned? Were the chosen methods appropriate? How well were methods applied?
Results and Degree of Challenge	How challenging was the problem and how well was it solved? What is the quality of the output/results produced?
Discussion, Reflection, Conclusions	How well do you discuss and reflect on what you did and made?
Presentation	How well is the project reported and documented, e.g. in terms of writing, organisation, styling, etc?
Completeness of Submission	Have all required elements been submitted?
Professional Conduct	Did you attend expected meetings with your consultant? How prepared were you? Did you record your progress?
LSEPI aspects	How well were potential legal, social, ethical and professional issues identified in the context of the project, and discussed in the report?

Grading criteria:

(NB: for the IN3007 module's required "learning outcomes", refer to the module spec: https://curriculum.citystgeorges.ac.uk/subject/2026/IN3007)

First Class	85% +	An outstanding project that shows exceptional ability, breadth, depth or originality. The work demonstrates a comprehensive knowledge and understanding of the subject area and satisfies the learning outcomes/assessment criteria in full. It shows evidence of independent reading, thinking and analysis. It is well-constructed and demonstrates a professional approach to academic practice. It is of a professional standard.
	70-84%	A very good project that meets all requirements to a high standard. The report demonstrates clarity of thought, good organisation of material, a focused argument and strong critical reflection. The work demonstrates strong knowledge of the subject area and satisfies the learning outcomes/assessment criteria well. Where relevant, it shows evidence of wide and comprehensive reading. It is clearly written and adheres to the principles of good academic practice. To achieve first class marks the report must show evidence of (at least three of) breadth of reading, some originality of thought applied to the problem, solution of substantial intellectual problems and depth of knowledge.
Upper Second Class	60-69%	A good project with work that demonstrates a sound level of knowledge of the subject area and makes a good attempt to satisfy the learning outcomes/assessment criteria, realising all to some extent and most well. Where relevant, there is evidence of thorough research of the topic(s). The work demonstrates clarity of thought; good organisation of work, artefacts and the report; some degree of reading beyond the strictly necessary, and originality of thought. The report is well-structured, logically written and demonstrates good academic practice. There may be some occasional weaknesses, but these are localised rather than systematic across the report.
Lower Second Class	50-59%	A fair project that demonstrates knowledge of the subject area and attempts to satisfy the learning outcomes/assessment criteria, realising all to some extent and some well, but perhaps also including irrelevant or underdeveloped material. Where relevant, the report provides some evidence of analysis but may be largely descriptive. There is evidence of reading or understanding beyond the minimum required for developing a solution to the problem. Method and outputs are more substantial and/or challenging. The work/report has a structure, but this may not always be clear. Attempts to demonstrate good academic practice are evident.
Third Class	40-49%	Satisfactory work that demonstrates basic knowledge of the subject area and provides some level of response to the learning outcomes/assessment criteria but only realises these outcomes and criteria to some extent and may not include important elements or information that is completely accurate. There is a clear definition of the problem to be addressed and the project objectives. Relevant literature has been identified and summarised in the report. An appropriate method has been followed. At least one output of value to an identifiable beneficiary has been produced. There is some evidence of learning and self-reflection, though perhaps limited. The presentation of the report is acceptable. Expression and structure may lack clarity and evidence of academic practice may be limited.
Fail	30-39%	A poor project encompassing unsatisfactory work that demonstrates very limited knowledge of the subject area and does not succeed in grasping the key issues. Learning outcomes/assessment criteria will not be realised. The work is incomplete or defective, demonstrating serious failure with respect to one or more of the required elements stated above.
Fail	< 30%	Very poor work that demonstrates no real knowledge of the subject area and which demonstrates a totally inadequate attempt to satisfy the learning outcomes/assessment criteria. Incomplete or defective work, demonstrating serious failure with respect to multiple required elements.
